Professional Netting Design • Installation • Service

NETServices – Providing effective solutions for barrier, protective, and containment netting systems from coast to coast

With quality and service as our foundation, NETServices brings over 24 years in business and 35 years of industry experience to netting and rigging, using high-quality components. Because NETServices specializes in design and installation of netting systems only, our clients are assured of a professional installation that is done right the first time, every time. Backed by the best warranties in the industry, we offer design and installation services for applications including golf, baseball, stadiums & facilities, landfill / litter fencing, bird mitigation, and other vertical or horizontal systems for most any application.

- DESIGN CONSULTATION
- STRUCTURAL ENGINEERING
- PROFESSIONAL INSTALLATION
- MAINTENANCE AND REPAIR
- NATIONWIDE

At NETServices we believe that quality, blended with excellent service, is the foundation to a successful business. Find out why America's top facilities consistently choose NETServices for their netting requirements.

— Dan Nunn, President

NETServices

888-365-NETS (6387)
www.NETServicesUS.com

NETServices designed and installed the netting and scrim system, including the AT&T branding, on the largest center hung scoreboard in the world at the new Dallas Cowboys Stadium in Arlington, TX.

"This was Roche's first time working with NETServices and you did a fantastic job of cooperating, planning, and scheduling. What impressed me the most was your detailed attention to planning and communication, which resulted in the execution, down to the day, of the very aggressive schedule that you had submitted."

— **Doug Olson, Senior Project Manager**
Roche Constructors, Inc.

Consulting • Design • Structural Engineering

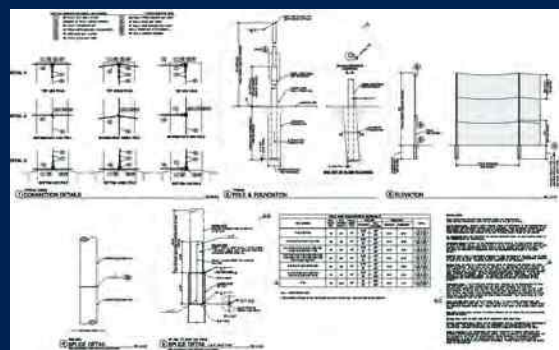

NETServices staff are here to support you from first contact through final inspection, designing and installing a system to meet your requirements and budget.

- Conservative structural engineering design combined with high quality steel fabrication by certified welders assures clients of superior steel poles.
- Engineering and calculations for location specific soil conditions, exposure class, and wind load requirements.
- Structural engineering seals are available for every job – any state.
- Your investment is protected with insurance coverage through an A++ Rated Product Liability Policy with 10 Million limit.

Ball Trajectory Studies are available with detailed analysis to help determine the appropriate height of netting and poles which saves future expenses required to raise netting and pole height while at the same time protecting your investment and reducing liability.

Construction • Maintenance

NETServices employs an extremely focused group of construction crews specially trained in netting installation with a safety and production record second to none. Whether working directly for the owner, or as a subcontractor, our goal is to support our clients by helping the project go smoothly, be completed on time, and at or below budget. In addition to 10 Million in product liability on our steel poles, NETServices has liability limits of 5 Million with an AAA+ carrier and an extremely low bonding rate available only to select companies with a claim free history.

Ball Trajectory Studies and Structural Engineering for all 50 states.

Starting with the Right Material and Components is the Key to Long Life and Durability

While quality of netting is important, as with any structure, the foundation and support is a critical factor in how long your system will last and the maintenance required. When designed and installed correctly, with application specific components, the support and framing structure should never need to be replaced with little to zero maintenance. Having the correct hardware and wire framing in place can double, or even triple the life of your netting.

NETServices uses only the highest quality netting, hardware, poles and components in our systems. We will always be on the leading edge of the industry supplying our clients with the best products currently available so that you can be assured of the best value for your investment.

Poles

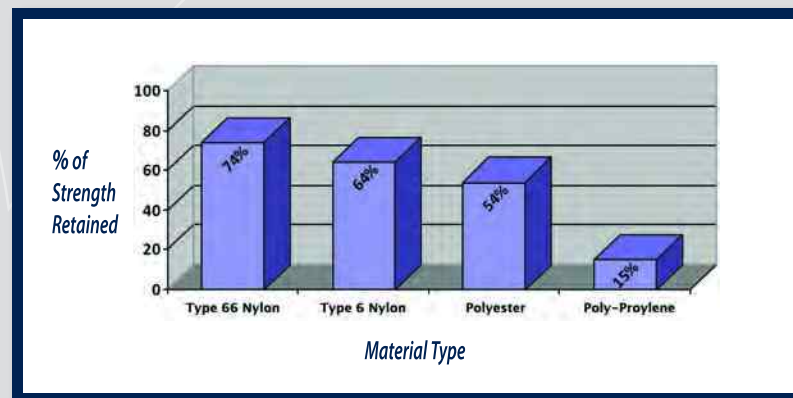

While NETServices does install wood poles to limited heights, we highly recommend steel poles for the best value and life of your investment. In our mission to use the highest quality materials and provide the best value to our clients, NETServices has chosen Coastal Netting as our Steel Pole Supplier. With a nationwide distribution system, Coastal has over 1,000 Steel Pole installations throughout North America without a structural failure:

- Pole diameters are 8, 10, 16, or 24 inch, dependent upon engineering requirements for the specific site location.
- Poles can be engineered to be extendable at a later date minimizing business interruptions.
- Coated with STRYK 5388®, a corrosion-retardant coating used on the Alaskan pipeline.
- Coating has a high degree of impermeability to moisture and will not support fungal growth in humidity and water-immersed environments.
- STRYK 5388® will not crack in extreme weather conditions and forms a solid coating to prevent corrosion or oxidation.
- Coating bonds with substrate preventing corrosion even if scratched or damaged.
- STRYK's elasticity prevents the finish from cracking due to pole movement caused by high winds.

Netting with up to a 10 Year Warranty: The fact is, the value of a warranty is only as good as the manufacturer. All of our netting is manufactured in the US by the largest domestic netting company using materials with decades of proven service.

Independent laboratory testing concludes that DuPont® Type-66-728 Nylon tops the charts for strength and life expectancy when compared to other netting materials

Raw (not dyed, not bonded, not stabilized) type 66-728 nylon tops the chart for strength retention after 9 months exposure in Florida. Simply put, when raw natural colored fibers were tested for 9 months of exposure in Florida sunlight, the DuPont® type 66-728 nylon retained the highest percentage of strength when compared to type 6 nylon, polyester, and polypropylene. The resistance to UV exposure and weathering increases substantially as UV stabilizers, dye-stuffs, and bonding agents are added in the manufacturing process. Starting with the right raw material is key in getting long life and durability. **Contact your NETServices representative for complete details on the benefits of DuPont® Nylon Netting and 10 year warranty.**

"You arrived on site when you said you would and continued to meet the construction schedule you provided me. With 37 years of experience in this profession I cannot remember a project that went so smoothly. You said what you were going to do and did what you said you would. There were no change orders or surprises thanks to your excellent coordination and communication skills...It was a pleasure to work with you and I would hire you back in a heartbeat to do future work for this city."

— Jim Dumont – Director and Project Manager – City Of Walla Walla

Tens of Millions of Square Feet of Netting Installed & Thousands of Poles Set Across the US

NETServices success comes from providing each client exactly what they need with a very individual approach to each project we undertake. Our team's personal dialogue with clients enables us to deliver exactly what is specified and expected. From first contact through final project closeout there will be no doubt that you made the correct decision entrusting our company with your project.

SAFETY • SERVICE • QUALITY • PRODUCTION

"Manhattan Construction Company appreciates your contribution to the success of the construction and timely completion of the Dallas Cowboys New Stadium. In many respects it was a very awesome and complex construction project. However, due to the diligence, concentrated and assertive efforts of NETServices and all of its dedicated employees, a successful completion was attained. Dan, your entire staff was exceptional in the performance required and teamwork necessary to bring this project to reality, and we look forward to working with you on many more projects in the future."

— John W. Dixon, Dallas Division President
Manhattan Construction Company

GOLF

Utilizing the highest quality components combined with the experience of our installation crews, our Netting Systems Experts can design and build your project from complete turn-key installations of driving ranges and fairway barriers to enclosed practice areas and cages.

Driving Ranges

Ball containment and property protection with netting to any height. NETServices also offers ball trajectory studies to help determine the proper placement, height, and length for your system.

Protective Barriers

Fairway netting barriers are valuable for protection of clients on adjacent fairways as well as the public where roads, highways, parking, or residential may need to coexist with your facility.

Enclosures

Don't have the space for a full driving range? NETServices can design and construct enclosed practice areas, indoors or outdoors, with 3-4 tees up to 20 tees as pictured at right.

Maintenance

Proper maintenance and service is essential in getting maximum life out of most anything you own. From complete panel replacement, including inspection of existing hardware, to small repairs, you can count on NETServices.

NETServices designs and installs THE LARGEST BASEBALL SAFETY NETTING SYSTEM IN THE WORLD! A total of nearly 400,000 SF of netting and running over 1 mile at 6,830 LF At Big League Dreams Sports Park in Las Vegas, NV

BASEBALL

From Little League and Scholastic to the Professional level, NETServices is here to meet your baseball application requirements. Using the highest quality components, NETServices can provide consultation, design, & installation of indoor or outdoor batting cages, training facilities, grandstand protection/screens, and foul line/home run barriers.

Foul Line & Protective Barriers

Often baseball fields are located along roadways, highways, or parking lots where ball containment is not only desirable, but necessary for safety and liability risk management.

Grandstand Protection & Screens

In today's litigious society, fans and spectators from Little League to Professional facilities need to be protected from foul balls and injury. NETServices can help you find a cost effective solution.

Outdoor Batting Cages

NETServices can provide turn-key netting solutions for your commercial batting cage project with design and installation from our experienced staff & crews and consulting on where to find the right equipment for your needs and budget.

Indoor Batting & Training Facilities

Indoor training facilities are becoming more in demand, and therefore a more popular business model. NETServices has designed and installed some of the largest facilities in the country.

LANDFILL

NETServices is proud to offer and install Litter Fencing co-designed with Coastal Steel Pole Systems. With increased awareness of environmental issues and increasing proximity of cities to landfills, the need for waste containment systems continues to escalate. From recycling facilities to solid waste landfills we provide litter fencing to meet any requirement.

Permanent Litter Fencing

Designed to encircle the perimeter of solid waste landfills or individual cells significantly reducing your current litter retrieval labor. Netting design forces trash towards the bottom, while outriggers on top ensure waste is contained. Netting is completely removable from its cable system and poles can be designed for relocation at a future date.

Transfer Stations

NETServices can design a litter containment system that is cost effective and compatible with the surrounding area, helping Transfer and Recycling Facilities increase the efficiency of waste collection.

Wind Screens and Dust Control

Special fabric around the perimeter of the facility provides dust control, visual screen, and wind blockage while preserving air flow in and out of the facility. Fabrics available in all % solids providing up to 97% dust stoppage.

Portable Barriers

Will not tip over and release trash during high wind conditions. Units are easy to relocate by attaching single or up to eight units to landfill equipment. Each unit comes with a tow cable.

BIRD and HABITAT

Netting systems for Hatchery rearing ponds are an ideal solution for keeping out undesirable animals or birds. Counterweight systems allow control to automatically lower and raise netting in snow or ice loads. NETServices can professionally design and install enclosure systems for animal habitat and aviary applications.

Bird Mitigation

Bird control netting is used for total exclusion of pest birds. Whether you're dealing with pigeons, swallows, starlings or another pest bird, we have a team of trained installers that can help. NETServices works with a complete line of humane and effective bird control products to help solve virtually any pest bird problem in commercial, military, agricultural and industrial settings.

Other Netting Applications

Netting systems can be an appropriate and cost effective solution for a variety of applications. If we don't highlight it here, it does not mean it can't be done or we haven't already done it. As an example, NETServices has installed netting to contain pumpkins being fired from air powered cannons at a major attraction in Stockton, CA. We also build systems for paint ball, gym dividers, and trap shooting ranges.

We invite you to visit our web site for further information regarding our company, service, and examples for other netting applications.

www.NETServicesUS.com

STADIUMS and FACILITIES

NETServices has experience in stadium solutions for netting, banner, and screening applications including design, engineering, large format digital printing, and fabrication.

Another First and Worlds Largest

At the new Dallas Cowboys Stadium in Arlington, TX – NETServices designed and installed the scrim and netting system for the world's largest HD television and center hung scoreboard. This project included design, engineering and fabrication of over 500 attachment clips and hardware which were installed on site by our own certified welders.

PUBLIC ART

Aligned with an internationally renowned artist who creates truly unique netting sculptures, NETServices has been fortunate to be involved in some of the most impressive art projects in the world.

"Water Sky Garden"

We were honored to be a part of Olympic History for the 2010 Vancouver, BC Winter Games with the installation of two netting sculptures at the Skating Oval in Richmond.

"Her Secret is Patience"

On both an engineering and visually artistic level, the piece installed at the new Phoenix Civic Space Center is truly impressive and something that has never been done to this scale or visibility in North America. Suspended by a massive armature 110' in the air, and spanning 100' at its widest point, NETServices executed the installation and final tailoring in close coordination with the design team and artist until the desired artistic effect was achieved.

What some of America's top facilities and contractors are saying about NETServices:

"NETServices and their personnel, both in the office and the field were professional and efficient throughout the entire design and construction process in all aspects. I was particularly impressed with the site personnel's efficiency and ability to make adjustments in the field to ensure the project was finished on schedule and at budget as well as their overall construction knowledge. When challenges arose or information was needed, Dan Nunn and his team at NETServices were always very responsive and constructive in helping to reach resolutions."

—— *Darrell Durant – President – Pete Duran & Associates, Inc.*
(Construction Manager at Risk – Big League Dream: Mansfield, TX)

"The concerns I had entering the construction phase of the project were completely alleviated by you and your crew. You told me when it would happen, how it would happen, and all the information required to make it happen. I appreciate the on-site crew's communication and care during the project. It was a pleasure to work with a contractor who honors their commitments to their customer."

—— *Ken Kays Jr. – Plant Facilities Manager - PING Golf, Inc.*

"This group did an excellent job with design and installation but the thing most remembered was their service...This was done without question at a fair and honest cost. Would I work with this company again? You bet I would."

—— *Stan Chapin – Operations Manager - Point Defiance Zoo and Aquarium*

"Even though we encountered unexpected underground utilities that caused a major relocation of the safety netting and the play field itself, you handled the situation very professionally and provided a remedy that was workable and cost wise. It is difficult to make major changes once construction has commenced and many contractors take advantage of the situation to increase their profits. I am gratified that this was not the case with NETServices."

—— *Ted Holden – City of Seattle Parks and Recreation Senior Project Manager*

"Dan conducted our business in a very professional yet friendly manor. He did exactly what he said he was going to do, when he said he was going to do it."

—— *Gary Schopf – PGA Professional and General Manager - Camaloch Golf Club*

"I especially appreciated your willingness to discuss and explain alternative product and installation options and avoid frequently made mistakes in purchasing golf netting and services. Your advance arrangements made everything go well and according to schedule...When a minor site issue was encountered during installation your crew adapted and made the necessary adjustment to the netting to make everything work out as originally intended. Bottom line, NETServices did an excellent job performing our netting replacement on budget and on schedule. The Commission would not hesitate to use your firms services again. Many thanks."

—— *Ray Essell – Parks Planner - Washtenaw County Parks & Rec.*

"NETServices delivered and installed the net we needed sooner than anticipated. I am also very pleased with the assistance and guidance you provided us. Your experience and knowledge of the business helped us make the correct decision as far as the style and appearance of the poles and netting material, as was your support and follow through throughout the installation process. I personally feel that the service NETServices provided was of the highest caliber and truly exemplary."

—— *Jorge Massa – General Manager - Lakewood Country Club*

Terri & Dan Nunn, Owners

Our Mission Statement

The mission of this company is to become "partners in spirit and purpose" with our clients to enable them to more effectively sell their products or services to a larger market at a greater profit and to provide protection and safety of life and property; while at the same time, satisfying our need to be creative, fresh, and innovative, and, in the process, grow in our careers and characters. Our company stands by the belief that quality, blended with excellent service, is the foundation for a successful business and when that principle is followed, our clients, and ourselves, will always succeed. As we succeed in meeting this goal, we will - as a natural by-product - make a reasonable profit as a company. The result of this profit will be greater personal income for each of us, better short and long range benefit programs, an enhanced working environment, and the acquisition of new tools and equipment to make us more productive in our jobs and to better serve our clients. By performing our jobs to the best of our abilities, we will be able to demonstrate through our portfolios or resumes that we are highly skilled and knowledgeable members of our profession.

We look forward to serving you!
